Are you a high-achieving Māori student studying science, engineering, maths, medicine, health sciences including population health, psychology, design, or similar? Do you have an interest in medical technologies research and development, and making an impact on healthcare for communities?

If so, we want you to join our research team!

The Auckland Bioengineering Institute (ABI), as part of the MedTech Research Network, is offering summer research scholarships for ambitious Māori university students to conduct biomedical engineering research. If selected, you will work with an established research group at the ABI doing cutting-edge biomedical engineering research in the fields of medical device design and development, experimental physiology, computational modelling, software / algorithm development, clinical translation of new medical technologies, or similar.

Eight scholarships are available, with each scholarship providing a tax-free stipend of $6,500 for 10 weeks of full-time research over the 2021/2022 summer period, beginning on Monday 29 November 2021.

To apply, you must:
1. be of Māori descent;
2. be a current NZ tertiary student (any year) studying science, engineering, maths, medicine, health sciences including population health, psychology, design, or similar;
3. be interested in medical technologies and making an impact on healthcare for communities; and
4. complete our online form here by 5pm Thursday 30 September 2021.

If you have any queries, contact Natalie Solomona on n.solomona@auckland.ac.nz or 09 923 6556.
