A quick guide to undergraduate Biomedical Science

If you’re a very able student with a passion for understanding the scientific basis of health and disease in humans and animals, then Biomedical Science could be the specialisation for you.

This challenging and immensely rewarding specialisation will deliver rigorous scientific training in a range of disciplines, allowing you to gain unique insights into this important and rapidly developing area of modern research.

As a Biomedical Science student at the University of Auckland you can choose to keep your specialisation general, or you can choose one of nine different pathways to focus your studies (see overleaf). Biomedical Science is one of only two ways you can be selected for Medicine (MBChB) at the end of Year 1. You may also apply for selection into Optometry, Medical Imaging or Pharmacy at the end of your first year.

If you’re interested in studying Biomedical Science with us you’ll find it beneficial to have a strong science background, including high school biology, chemistry, physics and/or mathematics.
