International education stimulates creativity and innovation, and drives our economy.

We welcome over 6,500 International Students to our campus each year bringing perspectives from over 110 countries to our classrooms.

International education is a significant contributor to the Auckland economy, accounting for $2.2 billion per annum and funding over 15,000 jobs in our region.

45% (1250) of the Doctoral candidates at the University of Auckland are International students.

On average each international PhD student produces 2.7 authored or co-authored papers, 1.1 authored or co-authored book chapters; and 3 authored or co-authored conference papers.

These students increase our research productivity, open up international research and funding opportunities and assist our academics to engage with international experts in their field. This in turn, helps support our high international rankings and reputation as the University’s research profile grows around the world.
