For Windows 8, using Wireless Zero

Note: This guide is for use with Windows 8 and its in-built Wireless Zero. Other wireless programs will likely work in a similar fashion.

Connecting to UoA-WiFi

In the "Start" window, drag the cursor to the bottom right-corner of the screen:

It should only take a few moments to verify and connect...

When verification and connection is complete, you will see the following message: "UoA-WiFi **Connected**"

You will now be able to browse the internet using the UoA-WiFi wireless network.

Trouble shooting:

Sometimes, Windows cannot verify the server's identity. If this happens when you are trying to connect to UoA-WiFi, click on **Connect:**

Depending on the amount of data usage on UoA wireless networks, you may need to repeat this step several times.
