Welcome to the Faculty of Medical and Health Sciences

Thank you for considering postgraduate study with us at the Faculty of Medical and Health Sciences. It is our pleasure to assist as you take the next steps in your academic, clinical or research career.

This prospectus is a guide to a wide range of postgraduate study options available across our Schools of Medicine, Medical Sciences, Nursing, Pharmacy, Population Health and Optometry and Vision Science. The faculty is a leading provider of tertiary education across New Zealand’s health sector and is highly regarded internationally for its medical and health research. Studying with us will give you a great opportunity to learn from skilled mentors, experience cutting edge research and facilities and become involved in programmes that seek to improve the health of real people.

The faculty is located in the heart of Auckland, which is ranked third out of 230 world cities for quality of living*, allowing you to discover and enjoy the many cultural and recreational opportunities our city has to offer.

The Grafton Campus has undergone recent refurbishment and now provides some of the world’s most up-to-date research, teaching, study and laboratory facilities. Our research activity is organised on a thematic basis, allowing our researchers to better collaborate across the faculty and wider University. The Grafton Campus sits alongside New Zealand’s largest tertiary hospital, providing high quality teaching and research translation in association with the newly established Auckland Academic Health Alliance.

Whether you are looking to advance your scientific knowledge, further your understanding of clinical practice or become involved in developing the nation’s healthcare system, the Faculty of Medical and Health Sciences can provide you with the ideal environment and support to assist you along your career path.

I warmly invite you to explore our postgraduate prospectus and website to discover our range of options available, and I look forward to welcoming you to the faculty in 2016.

PROFESSOR JOHN FRASER
Dean, Faculty of Medical and Health Sciences
The University of Auckland

Why study with us?

The University of Auckland is New Zealand’s world-ranked University and New Zealand’s pre-eminent research-led University*. Established in 1883, the University has grown into an international centre of learning and academic excellence. The University has a vibrant student community of more than 10,000 postgraduate students, with over 4,000 graduating annually, so you’ll be able to network with others who share your interests and commitment to education.

The faculty

The Faculty of Medical and Health Sciences is large, diverse and committed to improving the health of our local, national and global communities through excellence in teaching, research and service. The faculty works at the cutting edge of research, at the commercial biotechnology interface, in the clinical care setting and in the community.

We offer a broad range of postgraduate programmes that are innovative and designed to ensure our graduates remain in high demand, both here and overseas.

We pride ourselves on the close collaborations that we have developed with the country’s healthcare providers; this ensures our teaching and research is relevant to the present and future health needs of New Zealand.

Research

The faculty has fostered a very strong research culture and is host to a number of internationally renowned and highly regarded research programmes. We have a history of attracting eminent researchers, talented students and high levels of research funding.

Although research in the faculty is very broad, there are particular strengths, for example in cancer, neuroscience, cardiovascular biology, immunology, developmental biology, ophthalmology, audiology, population health, bioengineering and biomedical imaging.

A strong culture of collaboration exists at all levels through the faculty, allowing vital links across faculty, between faculties and with other tertiary research institutions.

Postgraduate students are a significant part of the research drive and outputs of the faculty and of the wider University. Increasingly our graduates are finding their niches in prestigious international research institutes including the universities of Cambridge and Oxford, UCLA, Burnham Institute and Harvard.

*See www.worldranked.ac.nz
Our postgraduate programmes

The faculty’s postgraduate programmes have been carefully designed to meet the needs of those aspiring to or involved in both academic and professional careers. They fall into two categories: research programmes and coursework programmes.

Research programmes consist of research generally leading to the writing of a thesis or research portfolio and are ideal for students seeking an academic, research or leadership career.

Coursework programmes generally incorporate both lecture and project/research components, and are designed for those who wish to advance their qualifications to achieve a career aspiration or for personal development.

The range of postgraduate degree programmes available in the faculty includes:

**Doctorates** – an advanced course of independent study and original research, presented in the form of a thesis. Doctorates are internationally recognised degrees and are often chosen by students intending to pursue an academic, research health leadership career. The faculty offers a named doctorate in Medicine (MD) as well as the widely recognised Doctor of Philosophy (PhD). The MD is often completed to present doctorate-level pre-existing research.

**Masters degrees** – advanced specialist study and/or research in a particular field. A masters degree is structured to enable students to develop and use their thinking and analytical skills to complete a major research component. It should demonstrate a capacity for independent thinking and also make a contribution to existing scholarship.

The faculty offers both research and taught masters degrees. A research masters must include a thesis or research portfolio, and may include some coursework. A taught masters includes coursework and a research project or dissertation. Applicants to a 120-point (one-year equivalent) qualification must have a bachelors degree (or a professional qualification and two years of relevant work experience) to gain entry.

**Postgraduate diplomas** – graduate level qualifications that provide opportunities to venture into research and are a pathway into a masters degree. A postgraduate diploma consists of 120 points (usually eight courses). Applicants normally need to have a bachelors degree (or a professional qualification and two years of relevant work experience) to gain entry.

**Postgraduate certificates** – gives students a postgraduate qualification in an area of interest or professional involvement. Often students begin with this qualification if they have been out of study for some time or they just want to see what postgraduate study is all about. Postgraduate certificates consist of 60 points of taught courses. Students normally need a relevant bachelors degree (or an equivalent approved professional qualification and at least two years of relevant work experience) to gain entry.

**Certificate of Proficiency** – most courses offered by the faculty can be taken as a Certificate of Proficiency (CP). Students sometimes enrol in a course as a COP if they wish to take only one or two courses and in that particular area. If you are considering enrolling in a course as a COP then you are advised to contact the Faculty of Medical and Health Sciences Student Centre or the department that offers the course for advice.

A full list of programmes available in the faculty can be found on page 4 as well as at www.fmhs.auckland.ac.nz/postgrad

Detailed information on admission requirements can also be found on the programme websites and in the University Calendar at www.auckland.ac.nz/calendar

1 Programme is not usually available to international students. ² Other specialisations/majors available through the Faculty of Science.
Where can postgraduate study take me?

The term “postgraduate” refers to any programme of study that is at a higher level than an undergraduate programme.

Why should I consider postgraduate study?

There are many reasons why you might consider postgraduate study:

- You may have an interest in a particular subject.
- You may have a desire to learn new skills or develop your current skills to an advanced level.
- You may be seeking benefits for your career.

Whatever your motivation, a postgraduate coursework qualification will provide you with the ability to explore new and emerging fields of study, give you the opportunity to acquire further specialist knowledge and theory, and in some cases, advanced knowledge of professional practice.

Completion of a postgraduate research qualification will enable you to demonstrate mastery of specialist knowledge and theory, give you a capacity for the definition and management of a research project and the opportunity and capacity to undertake original research and practice.

Students who complete postgraduate qualifications from our faculty add to the research strengths of the country and the clinical excellence of New Zealand’s health sector. Many obtain roles of responsibility within hospitals and healthcare centres, while others work internationally with globally competitive research groups and biotechnology industries, or find challenging positions within pharmaceutical and health promotion agencies.

Finding out more

Pathways

A feature of many of our programmes is that students may often move from one qualification to another, using the study they have already completed as a building block towards further study. This allows, for example, students to progress from a postgraduate certificate to a postgraduate diploma to a masters degree. There are some restrictions on programme movement, so it is recommended that students seek advice prior to commencing study.

Subjects, courses and programmes

The faculty offers a wide range of postgraduate subjects and within each subject, an extensive list of individual courses. In many cases it is possible to combine study in more than one subject area within a programme.

Teaching in the faculty is offered through six teaching units (the Schools of Medical Sciences, Medicine, Nursing, Optometry and Vision Science, Pharmacy and Population Health, and Te Kupenga Hauora Māori) and it is possible to combine subjects from different schools into one programme.

A full list of subjects and courses can be found via the Postgraduate Study Options link on the following page: www.fmhs.auckland.ac.nz/postgrad
Postgraduate study at the School of Medicine opens up a wealth of academic and clinical career opportunities.

The School of Medicine is committed to excellence in research and education, and to making a difference in our communities. It is physically dispersed across many District Health Boards: Auckland, Counties Manukau, Waikato, Waitemata, Northland, Bay of Plenty and Lakes. The school comprises eight clinical departments: Anaesthesiology, Centre for Medical and Health Sciences Education, Medicine, Obstetrics and Gynaecology, Ophthalmology, Paediatrics: Child and Youth Health, Psychological Medicine and Surgery.

Highlights

- The school is home to numerous outstanding clinical and basic science researchers in diverse fields.
- Opportunities are available for honours, masters, MD or PhD research degrees.
- The school delivers a variety of postgraduate specialisations, courses and registrar educational programmes through the departments.

Why study at the School of Medicine?

The school provides research-led teaching in clinical settings from quaternary hospital-based medicine to primary healthcare in rural settings. Strong linkages with the faculty’s other schools and units ensure a high level of integration with basic sciences, Population Health, Nursing, Pharmacy, Optometry and Māori Health.

People

The School of Medicine brings together academic clinicians and scientists to create a diverse, multidisciplinary environment that fosters collaborative research from the lab to the clinical setting and out to the wider community. Many of our academics are recognised at both national and international levels as leading researchers in their fields. Furthermore, the school houses academic health professionals who are leaders in the New Zealand health system, in postgraduate colleges and in junior doctor training hubs.

Specialist facilities and research resources

The Centre for Medical and Health Sciences Education works to promote excellence in teaching and learning through research and postgraduate programmes in Clinical Education. Highly relevant and offered online, the programmes provide an opportunity for clinical teachers to become more effective educators and researchers within the field.

The Werry Centre for Child and Adolescent Mental Health is a national centre based in the Department of Psychological Medicine. It provides high quality training to mental health professionals, promotes research advocates for mental health needs in New Zealand and supports the child and adolescent mental health workforce nationally.

The Simulation Centre for Patient Safety is a state-of-the-art centre for education, research and delivery of short courses for continuing professional development. It uses high fidelity human patient simulation in the context of anaesthesia, surgery and acute care.

The Advanced Clinical Skills Centre provides an excellent environment for research and training in key procedural and surgical skills at all levels. Major research themes in the School of Medicine relate to bones and joints, heart health, gerontology, strokes, endocrinology and nutrition.

What can I do with my degree?

Postgraduate study at the School of Medicine is a perfect pathway to clinical and laboratory research, teaching and service at The University of Auckland, other tertiary institutions and within the health sector. It can also enhance career opportunities in the biotechnology and pharmaceutical industries, and in health sector management and policy. Science graduates may progress in postgraduate studies via honours or a masters degree and then to a PhD. Medically qualified individuals can undertake an MD or PhD after completion of MBChB with a demonstrated research component.

These degrees can be an advantage for entry into competitive specialty training programmes and specialist roles.

The School of Medicine brings together academic clinicians and scientists to create a diverse, multidisciplinary environment that fosters collaborative research from the lab to the clinical setting and out to the wider community. Many of our academics are recognised at both national and international levels as leading researchers in their fields. Furthermore, the school houses academic health professionals who are leaders in the New Zealand health system, in postgraduate colleges and in junior doctor training hubs.
Teaching and research in the School of Medical Sciences focuses on the scientific understanding of the human body in both health and disease, as well as the study of drugs to treat and improve human health.

The disciplines of anatomy, physiology, pathology, pharmacology, nutrition and dietetics, medical imaging and molecular medicine provide the backbone to the teaching programmes for both science students and health professionals. The school consists of over 400 staff and graduate students and is world-renowned for its basic and applied research, ranging from molecular and therapeutic studies in cancer, infectious and neurological disease to the use of high-powered imaging in disease. We offer many opportunities for postgraduate study and training within more than 40 research groups. We welcome eager students who are stimulated by graduate study and are excited by the achievements and challenges of modern medical science.

### Highlights

- Worldwide reputation for basic and applied research ranging from genomic, molecular and therapeutic studies in cancer, diabetes and infectious, cardiac and neurological disease to the use of imaging to understand the structure and function of the human body.
- Over 30 postgraduate courses, tailored to the current research strengths of our academic staff, provide quality postgraduate training programmes as well as professional postgraduate programmes in Dietetics and Nutrition, and Medical Imaging.
- Masters and doctoral research degrees covering areas as diverse as cell biology, haematology, genetics and development, regenerative medicine, cell signalling, imaging, organ modelling, microbiology, infection and immunity, integrative physiology, neuroscience, nutrition, pharmacology, cancer biology and drug development.

### Why study at the School of Medical Sciences?

The answer is simple – to advance the scientific knowledge of the human body in both health and disease and to improve treatment. Nothing can be more exciting or rewarding than a new discovery: whether it’s a new drug, identifying factors in deadly diseases, devising better monitoring techniques to assist in diagnosis and treatment or simply understanding better the complexities of the human biological system.

Postgraduate research in the medical sciences teaches you scientific discipline and rigour, how to design and execute experiments and to analyse and report results accurately. These are all crucial elements of effective problem-solving and are skills that apply to almost any field, not just medical science.

### What can I do with my degree?

Tertiary teachers who combine science, biology and biomedicine/biotechnology are in great demand worldwide. Diagnostic facilities, medical facilities and the scientific and medical supply and sales industry require skilled and knowledgeable medical science postgraduates who have had some experience with research. Those with a doctoral research qualification can find exciting post-doctoral possibilities in either academic or commercial research laboratories around the world.

### Specialist facilities and research resources

All research laboratories in the School of Medical Sciences have recently undergone substantial refurbishment with the result that all research in the school is done in state-of-the-art laboratories. The school also houses a Biomedical Imaging Research Unit through which all modern imaging technologies are available.

"I chose postgraduate study as it provides the opportunity for scientific research under the guidance of top supervisors who contribute to new discoveries in medical science".

**Tamsin Robb** is completing an BSc (Hons), majoring in Biomedical Science. Pictured with her supervisor Dr Sunali Mehta.
The School of Nursing was established in 2000 to foster clinical learning within a multidisciplinary environment. The school contributes to the faculty vision of improving the health of communities through excellence in the development of the next generation of healthcare leaders, educators, researchers and clinicians.

The school offers a wider range of postgraduate programmes including Bachelor of Nursing (Honours), postgraduate certificates, postgraduate diplomas, Master of Nursing (MNurs), Master of Health Sciences (MHSc) and PhD. The school's Master of Nursing was the first programme in New Zealand to be approved by the Nursing Council as educational preparation for nurses applying for registration as Nurse Practitioner with prescribing.

## Highlights
- Diverse courses on offer with strong clinical focus.
- Individualised academic pathways that span postgraduate certificates through to PhD programmes.
- Strong research base in clinical specialties.

## Why study at the School of Nursing?
- Qualifications to support nurses in advancing their clinical and professional practice.
- Defined pathways for advanced nursing, including preparation for nurse practitioner.
- A rich teaching and learning environment with a well equipped clinical skills resource centre and simulation laboratories.
- Quality research environment.

## People
Leadership for the academic programmes is provided by senior academic staff. The school has successfully attracted highly qualified academic staff with strong clinical links, which ensures all our programmes are clinically relevant. Postgraduate teaching benefits directly from, and is strongly underpinned by, the research and evidence-based practice that the staff are engaged in.

## Specialist facilities and research resources
The model of postgraduate education offered by the School of Nursing is unique in the way that it works in partnership with clinical areas to provide a high standard of academic programmes; this is facilitated through strategic links with clinical teaching facilities and resources. The location of the school, within the Faculty of Medical and Health Sciences, provides opportunity for multidisciplinary teaching involving academics and clinicians and is a key strength of our programmes.

The school has a clear research strategy aimed at supporting staff and students in developing their research interests. Collaboration with researchers across faculties and other universities nationally and internationally has contributed to the growth of research within the School of Nursing. The school prides itself on conducting research with the potential to impact on and inform change in the health sector and social care system. The school has four research centres: Centre for Mental Health Research; Applied Ageing Research Group; Primary Health Care and Family and Child Research Group; and Palliative and End of Life Care Research Group.

## What can I do with my degree?
Graduates of our postgraduate programmes are well positioned to enhance their employment and promotion opportunities, leading to increased roles in advancing the profession of nursing.

“I chose postgraduate study to challenge widening of horizons in learning and for broadening future career opportunities.

“I’m grateful for the support from lecturers and the ‘curiosity’ to find out more with all the students I have interacted with.”

Helen Butler is studying towards a Master of Nursing.
Optometry and Vision Science

Optometry and Vision Science encourages students to pursue their studies to postgraduate level and to follow their interests in the field by taking the opportunities provided for self-directed research. There are a number of active research groups with the school, all undertaking leading edge clinical, biomedical and vision research.

Programmes on offer

Postgraduate Diploma in Science (PGDipSci)
This programme is available as a bridging pathway to postgraduate study (if required).

Master of Science (MSc)
There are two study options for the MSc, both of which can be studied part-time or full-time with some possibilities for distance-based study.

MSc taught clinical option for optometrists
This is a one year full-time/two years part-time (120 points) programme open to New Zealand registered optometrists who hold an annual practising certificate. The programme allows practising optometrists to undertake advanced study in a chosen sub-specialist area, eg, advanced contact lens fitting, paediatric optometry and binocular vision, low vision, therapeutic management of eye diseases and clinical application of myopia control.

MSc research
This is a one year (120 points) or two year (240 points) programme of supervised research. Current areas of research available include clinical optometry, anatomy and physiology of the lens and retina, visual psychophysics and ocular imaging.

Doctor of Philosophy (PhD)
The PhD degree is generally accepted as the appropriate qualification for a career in scientific research. It consists of advanced study and supervised research leading to the presentation of a thesis. This thesis must be an original contribution to knowledge and meet recognised international standards of scientific research. A PhD graduate can pursue a career in academia. Those with a clinical background are sought after by schools of vision science and optometry.

Why study Optometry and Vision Science?

Our postgraduate programmes are designed to assist and enhance clinical, biomedical and vision science research. The nature of the school means students get to know all staff well, have support and access to first-class researchers and their laboratories, and have the support of the administration team on a daily basis.

People

We have outstanding academic leaders in clinical vision, molecular vision, myopia, colour vision, cell and molecular biology of the retina and visual neuroscience.

Specialist facilities and research resources

We have a purpose-built pre-clinical teaching laboratory, which is also available for research purposes. There are three further dedicated clinical research rooms with specialist equipment to support research in myopia, amblyopia, colour vision and other areas of interest to optometrists and vision scientists. There are also specialist visual fields and imaging rooms. Researchers also have access to equipment and facilities on the Grafton Campus, which include MRI and advanced clinical imaging resources.

Highlights

- Outstanding state-of-the-art clinical and research facilities across two campuses.
- Leading researchers in key fields of clinical and biomedical vision research.
- Access to collaborators, equipment and excellent facilities.

"I chose postgraduate study to pursue my interest in neuroscience and neuroplasticity, in hopes to work in research-related fields with postdoctoral work in the future.

"My honours programme gave me the flexibility of maintaining my own schedule. My scholarships help me financially, enabling me to focus on my PhD full-time without having to work significant hours outside the university.

"The staff are all really friendly and supportive. It is particularly nice to know several PhD students in varying stages of their journey and share experiences with them."

Tina Gao is studying towards a PhD in Optometry and is a recipient of a University of Auckland Doctoral Scholarship and the HC Russell Memorial Postgraduate Scholarship.
Pharmacy

The School of Pharmacy offers a wide range of postgraduate programmes, has more than 20 members of academic staff, strong links to the pharmacy profession and a solid research base. Taught postgraduate programmes are offered in clinical pharmacy and the pharmaceutical sciences.

Robert Chen is studying towards a PhD in Pharmacy.

Our new postgraduate clinical pharmacy programme has been developed to match the current and future needs of the profession, in both primary and secondary care settings.

The postgraduate certificate, postgraduate diploma and masters degree allow our postgraduate students to graduate at the level most appropriate to their needs and career intentions. The programmes focus on the development of patient-centred, evidence-based, reflective practice.

The pharmaceutical science programmes focus on enhancing and developing knowledge and skills pertinent to the formulation, quality assurance and introduction of pharmaceutical products to the market, both nationally and internationally.

Highlights

- Extend your knowledge of advanced pharmacotherapeutics and its application to your workplace.
- Build your knowledge and skills to provide enhanced and innovative pharmacy services to patients with complex medication needs.
- Formulation and development of novel drug delivery systems.

Why study at the School of Pharmacy?

The School of Pharmacy introduced a new suite of postgraduate qualifications in clinical pharmacy in 2012. The programmes have been designed to allow students living anywhere in New Zealand to enrol. Most of the material is presented online and is supplemented by face-to-face weekend workshops for some courses. The new suite includes a Postgraduate Certificate in Clinical Pharmacy specialising in prescribing, which is offered jointly with the University of Otago.

This new qualification provides the knowledge and skills for registered pharmacists to register as a Pharmacist Prescriber with the Pharmacy Council of New Zealand. Students can also enrol in programmes in Pharmaceutical Sciences through the Health Sciences suite of programmes or apply to complete a research degree. Research topics are available across the three research themes of the school: medication-related health outcomes, neuropharmacology and drug delivery. All postgraduate programmes are centred in a culture of research and theory, designed to extend prior knowledge and skill in both breadth and depth and to promote deep learning.

People

The school has developed a strong research culture and staff members have a rapidly growing list of key publications and conference presentations. The school has specific research interests in medicine-related health outcomes, neuropharmacology and drug development and drug delivery systems.

Specialist facilities and research resources

The Drug Delivery Research Unit: AnQual is an initiative to establish teaching, research and training capabilities and systems to support regulatory compliance with new and existing medicines.

What can I do with my degree?

Graduates of our taught clinical pharmacy postgraduate programmes should enjoy significant career progression within their specialised areas of employment. Our postgraduate pharmaceutical sciences programmes are of particular value to those engaged in, or wishing to become engaged in, key areas of pharmaceutical science.

Population Health

Our School of Population Health (SOPH) brings together academic expertise in Epidemiology and Biostatistics, Social and Community Health, General Practice and Primary Health Care, Pacific Health, Hauora Māori, Health Systems and Audiology. We have two closely aligned research centres: the National Institute for Health Innovation (NIHI) and the Centre for Longitudinal Research (CLR). The combination of academics from backgrounds in social science, medical science and behavioural science provides a stimulating environment for learning.

Highlights

The school offers an exciting variety of postgraduate opportunities:

- A public health programme, including certificate, diploma and masters qualifications, available to new graduates, students from around the world and experienced health professionals.
- A range of postgraduate programmes that equip our primary and mental health and addictions workforce to work in the emerging flexible, interdisciplinary and multifaceted models of care, providing quality services in community settings and pathways to doctoral studies.
- An honours programme designed to challenge our most able bachelors students, providing them with the opportunity for an accelerated pathway into doctoral studies.
- Our courses use the latest flexible and e-learning technologies, enabling part-time study. A number of courses are available fully online.

Why study at the School of Population Health?

The school hosts a wide range of research activities involving many collaborators from around the world. Its courses are run by experienced researchers, the school is internationally recognised as a centre for learning.

People

Staff at the school come from many disciplines, and supervise research in a wide range of topics related to population health. Research themes in the school include the causes and control of chronic diseases, improving health behaviours, ageing, quality and equity in healthcare, the prevention of injury and disability and global and environmental health. Many members of the Centre for Addiction Research work at the school and undertake research on addictions and mental health.

Specialist facilities and research resources

The school has a strong research culture. There is a lively seminar programme, good support for new and emerging researchers and an active community of postgraduate research students.

What can I do with my degree?

Our graduates find employment in a wide variety of health services and are highly regarded by employers. Our postgraduate programmes are recognised internationally by policy agencies, non-government organisations, hospitals and other health organisations. The Postgraduate Diploma in Health Sciences in Health Informatics is of increasing relevance to those seeking a non-clinical role in healthcare organisations. Other qualifications offer advancement for health professionals studying part-time in specialised areas including addiction and mental health, palliative care, and general practice and primary healthcare. Graduates specialising in alcohol and drug studies are eligible for registration as addiction practitioners. Our Audiology graduates gain employment as clinicians in hospitals and private clinics.

“I chose postgraduate study to achieve my career goal as a health promotion adviser. “This programme has been an eye-opener to massive gaps that exist in social determinants of health. It has helped me grow personally as well as professionally in advancing my career.”

Varnika Vijay is studying towards a Postgraduate Diploma in Public Health.
Te Kupenga Hauora Māori

Te Kupenga Hauora Māori (TKHM) is located on the Tāmaki Innovation Campus and coordinates teaching in Māori Health across the Faculty of Medical and Health Sciences and externally, spanning foundation, undergraduate and postgraduate levels. Te Kupenga Hauora Māori houses the Tōmaiora Māori Health Research Unit.

Postgraduate study in Māori health offers excellent opportunities to gain critical awareness of Māori health and ethnic inequalities in health. Health inequalities are of significant national and international interest for research, policy and provision of health services. It is important that all public health workers in New Zealand have an understanding of how inequalities are created and maintained, and how they may be reduced and eliminated.

Students will learn from experts in Māori health, many of whom have established linkages with other indigenous health workers and researchers around the Pacific region.

A specialisation in Māori Health should be considered by graduate students whose future careers have Māori health development as a significant focus through research, policy, management, service, clinical and community pathways. Individual Māori Health courses should also be considered by health workers wanting to gain knowledge and insight into the fundamentals of Māori health and actions to reduce ethnic inequalities in health.

**Key learning outcomes**

Learning outcomes in Māori Health vary depending on the level and type of course, but in general we aim for graduates to have:

- An understanding of health and the forces that shape it.
- An understanding of the role various health-related professions can play in Māori health development.
- A critical understanding of health inequities between Māori and non-Māori and the determinants of these disparities.
- Skills to enable health-related professionals to monitor personal and institutional contributions to Māori health outcomes.
- An ability to apply Kaupapa Māori principles in a range of contexts in order to advance Māori health.
- A commitment to lifelong learning in Māori and indigenous health.

"I chose postgraduate study as this enables me to venture into the in-depth study on indigenous people."

"This programme builds on and strengthens the volume and visibility of indigenous people and guides purposeful action that will foster social transformation."

"Working with academics as supervisors and lecturers is very encouraging. They are open to mentoring and teaching you to become a successful researcher in the academy."

"My future aspiration is to become a strong advocate for health by effecting transformative change, whether it be within the community or at the grass-roots level."

**Atelaite Mapa** is studying for a Bachelor of Health Sciences (Honours)
International students

We welcome a diverse range of international students into the Faculty of Medical and Health Sciences at all postgraduate levels. We offer an inviting and stimulating environment with first-class teaching in a range of postgraduate programmes from certificate to doctorates.

The University of Auckland is New Zealand’s highest world-ranked tertiary institution by the Times Higher Education World Rankings of Universities in 2015. The University is rated in the world’s top 1% of universities in the areas of Clinical, Pre-clinical and Health*.

The faculty is introducing a new 180 point Master of Health Leadership in 2016 (subject to final approval) to complement the wide range of high-quality postgraduate programmes for international students. We also offer Postgraduate Diploma/Masters in Health Sciences or the Postgraduate Diploma/Masters in Public Health, amongst others.

Highlights
- Master of Health Leadership with three specialisations to be introduced in 2016.
- Direct entry for some two-year masters across a range of programmes**.
- International scholarships for doctoral study.
- Our multinational student body is supported by our pastoral care provisions.

English language requirements
For applicants whose first language is not English, evidence must be provided that shows proficiency in English at the level required for postgraduate study. The required minimum IELTS score is 6.5 with no band less than 6. The required minimum TOEFL scores are 575 in total for the paper-based test with a minimum TWE of 4.5 and 90 in total for the computer-based test with a minimum essay writing score of 21.

For more information and approved alternatives, visit: www.auckland.ac.nz/is-english

Health and travel insurance
All international students are required to have appropriate and current health insurance for their period of study. The insurance also has to cover their travel to New Zealand to study.

For more information see: www.auckland.ac.nz/is-insurance

Other key information
International students requiring assistance with the application process or advice about eligibility for entry to postgraduate programmes should contact the admissions team. We recommend you start the application process as early as possible so you have sufficient time to apply for your visa.

The University has a number of official agents and representatives overseas who can assist you with the application process in person.

A list of their contact details is available at: www.auckland.ac.nz/overseasrep

It is important to note that students with qualifications from an overseas institution may not be eligible to undertake clinical programmes in New Zealand unless they have registration with the appropriate registering body in New Zealand.

Any queries about specialty training or practising medicine in New Zealand should in the first instance be directed to the Medical Council of New Zealand at: www.mcnz.org.nz

“I chose postgraduate study to promote nutrition and health initiatives in the community to prevent and reduce the effects of chronic illness, by making it easier for people to achieve their goals for healthy lifestyles.

Heidi Heddings, from the United States of America, is studying towards a Master of Public Health.

**Application/eligibility requirements apply.

*Times Higher Education (THE) 2015 rankings; **Application/eligibility requirements apply.
How to apply

Step by step process

Step 1: Identify a subject area that interests you
Early in the admission process all applicants should discuss their proposed programme of study with the relevant postgraduate adviser for their subject or programme. Contact details for advisers can be found at www.fmhs.auckland.ac.nz/pgsubjects (click on your subject of interest).

Step 2: Identify the programme that you will work towards
A “programme” refers to a qualification. The term “postgraduate” is used to mean any programme that is at a higher level than an undergraduate programme. You have to be admitted to a programme before you can enrol in any courses. The faculty offers a wide range of high-quality postgraduate programmes – from research-based programmes to professional/applied programmes consisting predominantly of taught courses. Your choice of programme will depend on:
- The subject you are interested in studying.
- Your academic background and the entry requirements of programmes.

Step 3: Apply for admission
Apply for admission using the online application form (www.auckland.ac.nz/applynow). This application will be acknowledged by email, which will also provide a login and password to allow you to check the progress of your application online. The email will also list the certified documents the University requires to verify your personal details and entrance qualifications.

Places in some of the faculty’s postgraduate programmes are limited. Applicants are advised to apply by the University of Auckland’s closing dates (see Important dates, pg. 16) as late applications will only be considered if places are available. Intending students are advised to apply as soon as possible.

Step 4: Accept your offer of place and enrol
Once you have completed the formal admission process you may be offered a place in a programme. You must accept this offer before you may enrol in any individual courses. You need to be formally enrolled in a course eg, NURSING 701 to get access to most University services, including access to the Library, online Library materials and online course information (CECIL).

Your enrolment must also be completed no later than the end of the second week of each semester or a late enrolment fee may be charged. Once you are formally enrolled an invoice will be generated.

Application requirements
The following documents are usually required:
- Verified copies of your birth certificate, passport, Permanent Residency (Residence Visa, Residence Permit, Returning Resident’s Visa) or Certificate of Citizenship.
- Evidence of name change, eg, marriage certificate, divorce certificate, change of name by deed poll if necessary.
- A colour passport-size photograph.
- Completion certificate of degree/diploma.
- Official academic transcript.
- Evidence of English language proficiency (if applicable).
- The application fee (if applicable).

Documentation must be a certified copy of the original. The University does not accept unverified photocopies or facsimile copies. All documents must also be in English or an official translation must be supplied.

Other documents may also be requested depending on the programme for which you are applying. For example, applicants for our nursing programmes are required to supply a copy of their Nursing Council Registration and a copy of their Annual Practising Certificate.

If you have any enquiries about registration or practising in New Zealand, please see the following websites for further information:

Medical Council of New Zealand
www.mcnz.org.nz

Nursing Council of New Zealand
www.nursingcouncil.org.nz

Pharmacy Council of New Zealand
www.pharmacycouncil.org.nz

Admission to doctorates
Applicants for a doctoral degree must have a bachelors (honours) or masters degree with first class or second class (division I) honours (or an equivalent qualification or experience) and a proven ability to carry out independent research.

All intending doctoral students must complete and submit an online Application for Admission at www.auckland.ac.nz/applynow

Before you begin, make sure you have electronic versions of:
1. Relevant academic transcripts.
2. Statement of Research Intent.
3. CV and/or resume.
4. Two reference letters.

Information on the doctoral registration process:
www.fmhs.auckland.ac.nz/doctorates

Support for postgraduate study

Student Learning Services
Student Learning Services facilitates the development of effective academic learning and performance skills in students and helps those who encounter difficulties in their studies. Academic tutors teach process skills, which are crucial to academic success. Programmes cater for the learning needs of all students from first year undergraduates to postgraduates.

Doctoral Skills Programme
The Doctoral Skills Programme offers a variety of courses and consultations to help students complete their doctorates successfully and in a timely manner. Advice on career planning and professional development is also available for students to better achieve their goals upon completion of the doctorate.

Book a course at www.auckland.ac.nz/doctoral_skills

Student Learning Services
Phone:
City Campus +64 9 923 8850
Tāmaki Innovation Campus +64 9 923 6665

English language support
DELNA (Diagnostic English Language Needs Assessment) is a free service that determines the level of English language support you will need to succeed in your studies.

www.delna.auckland.ac.nz
Free services to improve your academic English skills, including language learning materials and help with academic writing, listening skills and pronunciation are provided by English Language Enrichment.

www.cad.auckland.ac.nz/ele

Scholarships and financial support
The Scholarships Office staff are available to advise students on scholarships and funding opportunities, student loans and allowances, and money management.

Scholarships available within the University of Auckland are administered through:

Scholarships Office
Phone: +64 9 923 7494
Email: scholarships@auckland.ac.nz
www.auckland.ac.nz/scholarships

Research facilities
Significant research facilities at Grafton Campus include:

- The Centre for Brain Research, bringing together more than 200 neuroscience researchers and clinicians.
- The first-class Biomedical Imaging Research Unit.
- The Centre for Advanced MRI, a direct provider of research information to Siemens globally.
- The New Zealand Neurological Foundation Human Brain Bank, supporting research in neuroscience.
- Fully integrated Human Anatomy Teaching Laboratories and Student Learning Centre.
- New Zealand’s foremost drug development laboratories.
- Sophisticated data acquisition and analysis facilities.
- DNA sequencing facility.
- A wide range of sophisticated biomedical research equipment and technologies.
- Mechanical and electronic workshops to develop and construct specialist equipment for research and teaching projects.

Privacy
The University of Auckland undertakes to collect, store, use and disclose your information in accordance with the provisions of the Privacy Act 1993. Further details of how the University handles your information are set out in a brochure available by phoning 0800 61 62 63.

Disclaimer
Although every reasonable effort is made to ensure accuracy, the information in this document is provided as a general guide only for students and is subject to alteration. All students enrolling at the University of Auckland must consult its official document, the current Calendar of the University of Auckland, to ensure that they are aware of and comply with all regulations, requirements and policies.

We advise that the University of Auckland is not involved in the employment of completing health professional students and can make no guarantee of post-qualification registration or employment in New Zealand or any other country.
