

The Department of Computer Science

Antony Stubbs

Antony graduated with a first class Honours degree in Computer Science in 2004. His interests were in data communications, software design, computer graphics and architecture.

"I took a basic job debugging a horribly written VBA web application. I really didn't like this job but it taught me a lot about myself. I tried going back to university to do a thesis, but that didn't suit me either. I was accepted into IBM's graduate program after a traveling around Australia for a bit.

I worked at IBM for nearly three years. It provided me with a lot of valuable experience - some travel, including New York, a lot of fun, and some of the time, a lot of boring work.

I wanted to go further because I am passionate about Computer Science. I left and found a contracting job in The Netherlands. I am doing some very interesting work here developing Portal 2.0 support for an open source web application framework called Wicket. I plan to stay on this contract for six months or so, traveling around Europe in my spare time, then move on to something else. I have been in communication with Red-Hat for several months now regarding full time Open Source work and also possibly technical sales support or an Architect role in the United Kingdom or The Netherlands."
