

Manually connecting to network data locations

There are a number of network locations where user data can be stored and when a user logs in within Faculty of Engineering on a *managed* device a *login script* is automatically run in the background which connects them to their various network based data locations.

In the Faculty of Engineering the most common data locations are:

- **Home**: Personal storage space allocated to each user.
- **Long Term Archive**: Storage space allocated to users and groups to keep data which needs to be readily available for reference at any time in the future.
- **Projects:** Storage space allocated to users and groups of users where they can store data accumulated whilst pursing project type activities.
- **Research:** Storage space allocated to users and groups of users to store data accumulated whilst pursing Research type activities.
- **Shared:** Storage space where users can share data with other users.
- **Applications:** Storage space where licensed and approved software can be placed and either pushed out to client devices or in some cases run from.

Each network data location is assigned a particular *letter* to easily identify and reference the location and the data therein.

- Home: **H**
- Long Term Archive: L
- Projects: **P**
- Research: **R**
- Shared: S
- Applications: **Y**

The *paths* to each network location are as follows:

- Home: <u>https://files.engineering.auckland.ac.nz/hdrive/userID</u>
- Long Term Archive: <u>https://files.engineering.auckland.ac.nz/ldrive</u>
- Projects: <u>https://files.engineering.auckland.ac.nz/pdrive</u>
- Research: <u>https://files.engineering.auckland.ac.nz/rdrive</u>
- Shared: <u>https://files.engineering.auckland.ac.nz/sdrive</u>

• Applications: <u>https://files.engineering.auckland.ac.nz/ydrive</u>

How to manually connect to network locations

Click on Places -> Connect to Server

It will come up a window similar like below. Choose Secure **WebDav (HTTPS)** from **Service Type**

	Image: Service State Image: Se	Press of the statement of the second		No. of Vice and Vice
Applications There is the model of the second secon	Approximation from the set of the	the long 104		
Approximent Proxim Applier (C)	Approximent Preze typicer 22			
State	Image: State Stat	C Applications Places System 6622		Hunjal 6, 5.22 PM
			Service System Service System Servic	

Enter the link address "files.engineering.auckland.ac.nz" (without double quotes) in the Server space, and then enter a drive connection, e.g. sdrive.

Note: Don't type in the User Name yet

Service type: Genues test Server: [re-	Kine (HTTPS) 2	
Port Solider User Name		
Bostmark game	nLM Gymeit	

It will prompt for user credentials after clicking on Connect.

A similar window will come up like below after the WebDav share was mapped. To disconnect, click on the Eject bottom next the WebDav share.
