EXERSCI 706
Seminar in Advanced Exercise Physiology
(15 points)
(Semester 2, Newmarket Campus)

Who should take this course?
Students who are interested in developing a more thorough understanding of the physiological adaptation to exercise and physical inactivity. Current research publications in exercise physiology and the use of relevant experimental techniques will be discussed and examined in a seminar-based format.

Learning Outcomes
On completion of this course, a student would be expected to:

1. Demonstrate a greater comprehension of the physiological response and adaptation to exercise and physical inactivity.
2. Demonstrate a broader appreciation of experimental approaches to the manipulation and determination of the response and adaptation to exercise and physical inactivity.
3. Be better able to select, interpret, critically analyse, and integrate information from relevant research literature.

Learning and Teaching
Students are expected to prepare for, attend and actively contribute to twelve, 3-hour seminar-type classes.
Teaching Staff

Dr Graeme Carrick-Ranson
Office: 731.335
Office Hours: TBA
P: 373-7599 ext. 86849
E: g.ranson@auckland.ac.nz

Dr Nick Gant:
Office: 731.332
Office Hours: TBA
P: 373-7599 ext. 86607
E: n.gant@auckland.ac.nz

Assessments*
Each student will:
1. Critically analyse, present and lead discussions of selected research articles (30%)
2. Present and discuss a selected experimental method and its application (15%).
3. Prepare, ask and provide written answers for questions of presenters (7.5%).
4. Assess the presentations of others in order to improve group-learning outcomes (7.5%).
5. Write a final examination on material covered in the seminars (40%).

Student Feedback
97% of students were satisfied with the quality of this course (2015).
