Other:

Please tick this box if you do not wish to receive news updates from the Centre for Brain Research

Every day at the Centre for Brain Research our researchers are working hard to identify and develop new treatments for brain disease.

Stroke, Alzheimer's, epilepsy, Parkinson's, multiple sclerosis, Huntington's and other brain diseases are all devastating conditions for patients and their families.

We need to learn more about how our brain works, how these diseases change our biology and how we can halt that process.

More research is essential. Yet without human volunteers, many of our health and medical studies simply won't happen. We need healthy volunteers as well as people with neurological conditions to participate.

If you are interested in contributing to current or future research projects at the Centre for Brain Research (CBR), you can join the Volunteer Register. The Register is a secure database, which can only be accessed by CBR administrators.

From time to time, the administrators search the database for people who might be eligible to take part in ethically approved research projects at the CBR. Information about the study is then sent out to potential volunteers, along with how to get in touch if they are interested in participating. The information on the Register is only used for this purpose, and will not be made available to any other people or groups.

If you decide to join the register, you can change or delete your information at any time by contacting the CBR.

The Register has been approved by the Northern X Regional Ethics Committee, reference NTZ,109/90/EXP.
