Summary statement

I am the lead researcher for the New Zealand Attitudes and Values Study (NZAVS). The New Zealand Attitudes and Values Study is a representative longitudinal panel study that assesses change and stability in the personality, social attitudes, and values of roughly 60,000 New Zealanders each year. This is the only social psychological study of its type in New Zealand, and one of very few in the world. I have been the primary driver for this study, have sourced funding for the project, and developed numerous research collaborations both internationally and locally based on data from the project.

The New Zealand Attitudes and Values Study attracts numerous post-graduate students. Data from the project forms a core component of my undergraduate teaching. Working with data from the NZAVS generates a lot of interest from undergraduates, and informal feedback from students indicates that this is a driving factor in generating interest to work with me at the post-graduate level.

I have published 358 peer reviewed articles and book chapters (including papers in press). I am the lead editor of the award-winning *Cambridge Handbook of the Psychology of Prejudice*. My h-index according to Google Scholar is $h = 65$ and my i10-index is 248. According to Google Scholar, my collected work has been cited a total of 17,539 times. I am ranked 11th on Google Scholar out of all researchers who have listed 'political psychology' as one of their areas of research expertise, 10th of all researchers listing 'prejudice', and 58th of all researchers in the word listing 'health psychology' as an area of research expertise (as of Jan, 2021).

I consistently receive excellent teaching evaluations, with ratings of overall effectiveness as a lecturer in the 92-100% range for all courses in which I teach at both undergraduate and graduate levels.

Research overview

My research focuses on developing, maintaining, and analysing data from the New Zealand Attitudes and Values Study (NZAVS). The study tracks changes in various social psychological and health factors over a twenty-year period, from 2009 to 2029. The study aims to provide information about how the personality, attitudes and values of New Zealanders may be changing over time. This is important because we currently know very little about how peoples’ opinions, values and levels of satisfaction with their lives may change gradually over time, and perhaps also change rapidly in response to current events in society. Another key aim of the study is to examine how changes in attitudes and values may relate to changes in health and wellbeing over time. Because the annual survey uses repeat respondents, it can track subtle changes in attitudes and values over time, and is becoming an important tool for researchers.

I am actively involved in research on prejudice and discrimination more generally. The key long-term goal of my research agenda is to develop models that will help to understand, predict change in, and therefore help to offer practical suggestions and applications for reducing prejudice and discrimination in New Zealand. My research builds toward this overall goal, and I am actively

engaged in work with the Human Rights Commission to advise upon the development of, and evaluate the efficacy of a new nation-wide anti-racism campaign that started in 2016.

I have a strong interest in research methods and statistics. I have expertise in numerous multivariate analytic techniques, and regularly employ (and teach) analyses such as Structural Equation Modelling, Markov Chain Modelling, Multi-level Random Coefficient Modelling, Latent Profile Analysis and Mixture Models, Latent Growth Modelling, Modelling using Bayesian Estimation, and meta-analysis. I regularly teach workshops on longitudinal data analysis and multilevel modelling using Mplus at the post-graduate level.

I believe in community engagement through research, and the free provision of research expertise within the local community. For instance, on the New Zealand Attitudes and Values Study (NZAVS) website, members of the community and local not-for-profit organizations can request specialist reports from us, and we will provide these free of charge. I explicitly state this in the mission statement on the NZAVS homepage: ‘*Research reports using anonymous data from the study may also be requested strictly for the purposes of not-for-profit social and health research in New Zealand.*’ The ability to provide data from the representative NZAVS specifically for not-for-profit research is something I am passionate about, and a core motivation for why I set up the NZAVS.
